

基表结构:

user(id, name, pswd, last);

email(id, sender, receiver, time, title, body, variety, valid);

draft(id, sender, receiver, title, body);

建表语句:

```
create table user ("
  "id      varchar(40) not null, "
  "name    varchar(20), "
  "pswd    varchar(40) not null, "
  "last    int          not null,"
  "primary key(id));
create table email ("
  "id          integer          primary key,"
  "sender      varchar(40)      not null, "
  "receiver    varchar(40)      not null, "
  "time        varchar(40)      not null, "
  "title       varchar(200)     not null, "
  "body        varchar(1000)    not null, "
  "variety     int              not null, "//0-norm;1-spam;2-work;3-friend;4-un
  "valid       int              not null);
create table draft ("
  "id          integer          primary key,"
  "sender      varchar(40)      not null, "
  "receiver    varchar(40)      not null, "
  "title       varchar(200)     not null, "
  "body        varchar(1000)    not null);
```
